START WITH SOME FACTS...

Every day approximately **8 million** pieces of plastic pollution find their way into our oceans.

100,000 marine mammals and turtles and **1 million** sea birds are killed by marine plastic pollution annually.

Producing one tonne of plastic generates up to **2.5 tonnes** of carbon dioxide.

There may now be around **5.25 trillion** macro and microplastic pieces floating in the open ocean. Weighing up to **269,000 tonnes**.

Plastic production has been forecast to grow by 60% by 2030 and to triple by 2050.

PLASTIC RECYCLING

Plastic recycling is the re-processing of plastic waste into new and useful products. When performed correctly, this can reduce dependence on landfill, conserve resources and protect the environment from plastic pollution and greenhouse gas emissions. Most plastics are made from petroleum, a limited resource that is extracted at great expense from the earth. When you recycle your old bottles, you are helping to save this valuable resource for future generations.

RPET MATERIAL

The 'R' in RPET stands for 'recycled', Virgin PET plastic, which is made from oil and petrochemicals, can be recycled in RPET. The plastic content in RPET has been recycled, so the material is produced without exhausting natural resources. In the recycling process, plastic is collected, cleaned and re-made into products.

RECYCLED OCEAN PLASTIC

Recycled ocean plastic fabric is an advanced material that repurposes discarded plastic from the oceans into quality textiles. We gather, clean, and convert oceanic plastic debris into fibers, which are then woven into long-lasting fabric. This process not only gives waste a second chance but also funds essential initiatives to clean our oceans and beaches. This fabric generates fewer greenhouse gas emissions compared to traditional materials, contributing to a healthier Earth.

ORGANIC COTTON

Organic cotton is grown using methods and materials that have a low impact on the environment. Organic production systems replenish and maintain soil fertility, reduce the use of toxic and persistent pesticides and fertilizers, and build biologically diverse agriculture. Third-party certification organizations verify that organic producers use only methods and materials allowed in organic production. Organic cotton is grown without the use of toxic and persistent pesticides and synthetic fertilizers.

KRAFT PAPER

Washable Kraft Paper is a German engineered paper that were used in making jeans tags. It is made from natural paper fibre that has been tanned, resulting it to be very durable and water resistance. Washable paper is produced from cellulose fiber. This is a substrate of wood and is a natural material. The collection is a good alternative for plastic, This light and versatile material sews, cuts, and washes just like fabric. The fiber-based texture softens and crinkles with handling and washing.

COFFEE GROUND

Coffee fabric is the perfect result of using recycled coffee grounds combined with discarded PET plastic bottles. The coffee grounds are finely ground into powder and then mixed with other ingredients to convert them from powder form into fibers. Finally, they are used to create high-quality coffee fiber fabric. The coffee grounds are processed in a low-temperature, high-pressured environment to make them into yarn which is then woven into naturally high-tech fabric.

JUTE MATERIAL

Jute is a natural fibre that is extracted from the bark of the jute vegetable plant. A long, soft and shiny fibre that is one of the strongest fibres in the world, the second most produced natural fibre after cotton. Jute fibre is 100% bio-degradable and recyclable and thus environmentally friendly. A hectare of jute plants consumes about 15 tonnes of carbon dioxide and releases 11 tonnes of oxygen.

FELT MATERIAL

Felt is a type of matted fabric that consists of textile fibers condensed and pressed together. Traditionally made with wool or another type of animal fur, it's now possible to make felt with acrylic and other forms of synthetic fibers. Wool felt is highly flame retardant, and it extinguishes itself. This textile also has sound-dampening properties, and it is highly moisture-wicking and absorbent. Felt holds the distinction of being one of the only fabrics made without weaving or knitting.
